

Land Access and Accessibility to Culturally Important Plant Species

The Squamish Nation has many culturally important plant species that they have been using since time immemorial. Using this map, you can visualize the locations of many of these plant species relative to access limited regions (e.g. parks, private roads, gates, etc.). This lack of free or clear access to culturally important areas is only one example of ongoing limitations that municipal, provincial and federal governments are imposing on the Squamish Nation. We hope this map may be used to advocate to governments for further access and clarity of access for Nation members.

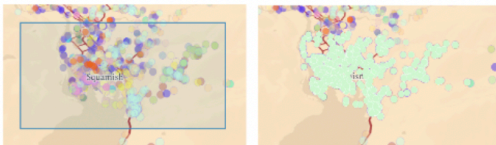

Interactivity

To see species ID:

Click on circle geometries to activate popup.

Query plants by spatial extent:

Hold down shift and Drag to create bounding box:

(hold shift and click anywhere on map to clear selection)

Changing horizon view:

Right click and pan around screen to rotate and change horizon view.
